Additional Comments concerning the Yucca Mountain Project:

- 1 Please do not bail out the utility companies who chose a dangerous, non-sustainable, non-profitable method of energy production. Do not transfer the accountability and financial burden to the public. Make the utility companies accountable, site by site
 - 2 for managing their nuclear waste. Do not spread the problem further by transporting nuclear waste cross-country and storing it under more questionable conditions at Yucca Mountain. According to Dr. Stearnglass, a noted researcher, the radiation that comes out of an x-ray is nothing like the radiation from a nuclear bomb or a nuclear reactor. Nuclear waste radiation has been found to be 100 to 1000 times as serious as the same dose of radiation from a chest x-ray.
